Title: **Developed eLearning platform**

Type: **Service/Product**

Due date: **14-10-2017**

Description: Development of e-Learning platform for online PT&SCHE based on the latest technological advancement and pedagogical achievements including mobile e-Learning and learning activity management conception. Approach is based on strong structuring learning content granularization and reusability. The pilot e-Learning courses for three PT and SCHE programs will be developed.

1. Activities:

<p>Activity 1:</p> <p>Status:</p>	<p>Preparation of the supporting document “LMS selection criteria - an Academic perspective” from the perspective of</p> <p>Final version of documents on Serbian and English Link:</p>
<p>Activity 2:</p> <p>Status:</p>	<p>Development Platform selection ODOO development platform is selected</p>
<p>Activity 3:</p> <p>Status:</p>	<p>Demo installation of the selected Platform</p> <p>The odoo platform is installed and development and test environment</p>

	established on one of the BMU servers.
Activity 4: Status:	The vision of the architecture of the future eLearning Platform High Level vision and architectural design of the elearning platform. In progress - Draft version
Activity 5: Status	Development and Customization Test version available at BMU server URL: http://89.216.56.113:8069
Activity 6: Status	Template for SCHE Program content preparation for eLearning Platform Draft version is available on Google drive Link:

2. Next Activities:

Activity 7: up to 15. august	Finishing development and make final tests
Activity 8: up to 15 Sept.	Installation of final version on 2 production environments, VISER and BMU
Activity 9: up to 15. august	Produce User Documentation in a form of a SCHE course
Activity 10: up to 10.oct	Final adjustments, bug fixes, and support for setting up the courses content

3. Some facts about the selected ODOO Dev Platform

Based on the conclusions of the document for the selection of LMS platform, it was clear that we should choose a platform that has the following characteristics:

- Open source
- Matured (graduated)
- Suitable and very open for developing broad spectrum innovative applications that are easy to integrate with other modern application and meet expectations that students have.

According to these requirements, **Odoo** is the platform of choice:

1. **From Wiki:** “*Odoo is an all-in-one business software capable of covering all business needs, including [CRM](#), Website/e-Commerce, billing, accounting, manufacturing, warehouse- and project management, and inventory, all seamlessly integrated*”
2. **12 years of continuous development** of the open source community that counts more than 2000 developers led by the Brussels' company Odoo S.A. Odoo S.A is recognized as an example of innovation, potential, growth and success in the Belgian economy, Odoo has been chosen by the European Commission and the European Investment Bank (EIB) to illustrate the 315 billion euro investment plan jointly launched by the two institutions to foster business competitiveness

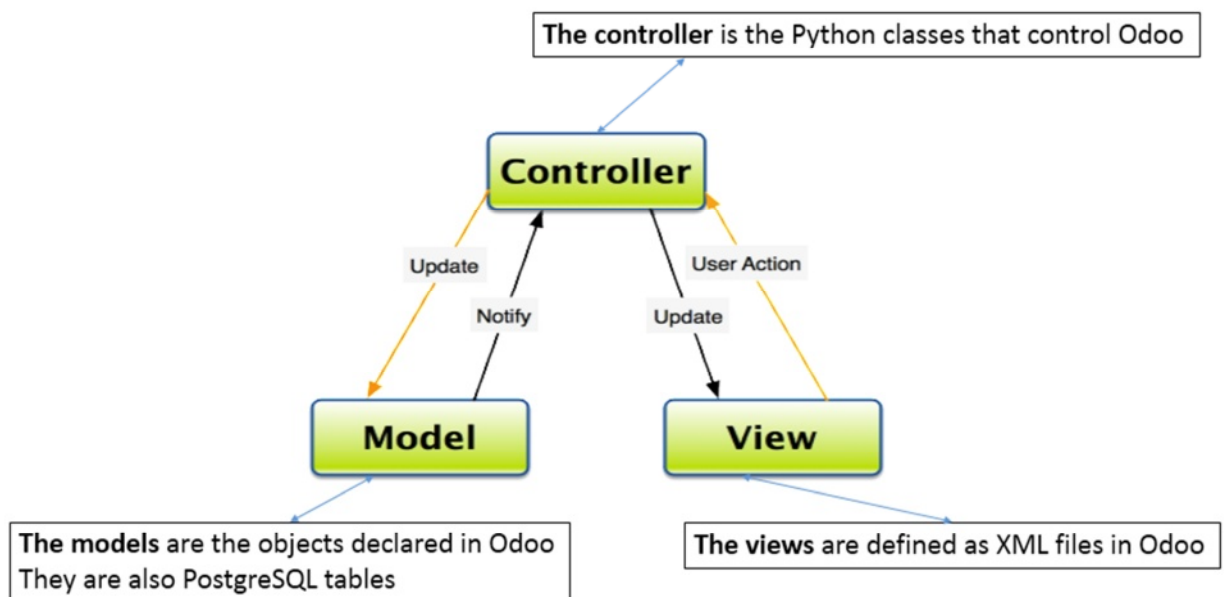

3.

4. **One of the Top 10 Open Source.**

a. <http://www.tgdaily.com/technology/10-best-open-source-software-in-2017>

- i. 1. LibreOffice
- ii. 2. FlatPak
- iii. 3. Rocket.Chat
- iv. 4. Mattermost
- v. **5. Odoo**
- vi. 6. iDempiere
- vii. 7. SuiteCRM
- viii. 8. Alfresco
- ix. 9. Camunda BPM
- x. 10. Talend Open Studio

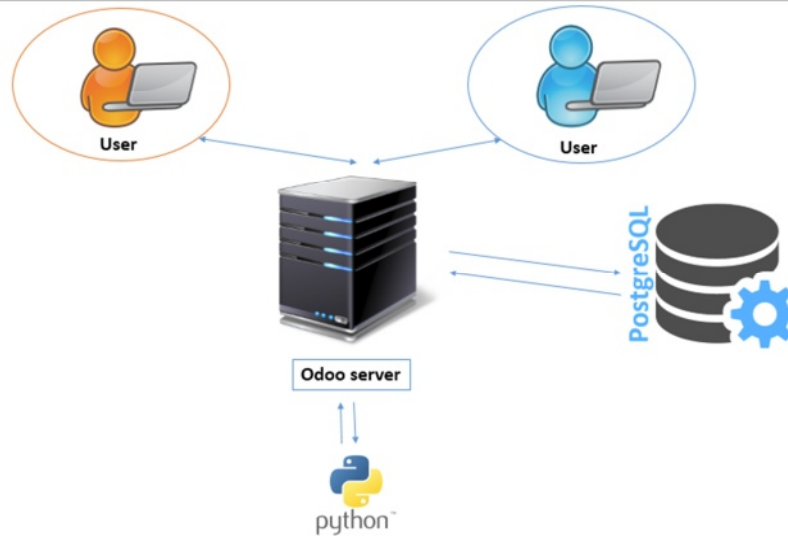

5. **Odoo is built upon a Model-View-Controller (MVC) architecture.** One of the primary goals of this architecture is to separate the visual display of the information from the business rules and management of the underlying data.

6. **Odoo system is formed from three main components:**

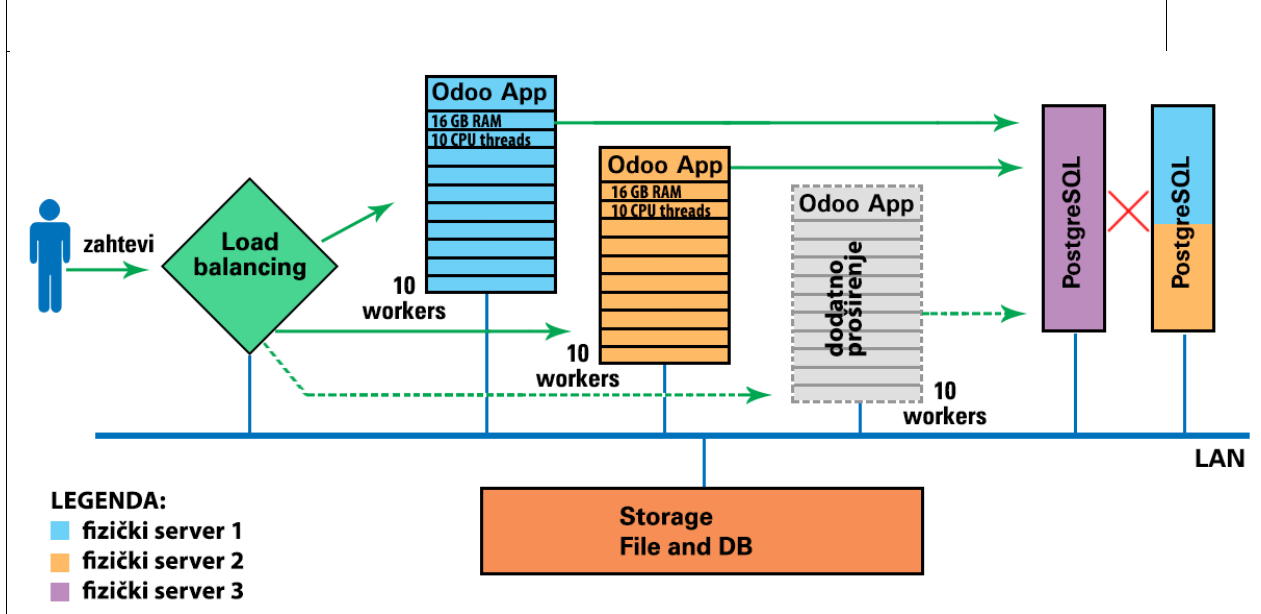

- a. **PostgreSQL database server:** which contains all of the databases, each of which contains all data and most elements of the Odoo system configuration.
- b. **Odoo application server:** which contains all the enterprise logic and ensures that Odoo runs optimally. One layer of the server is dedicated to communicate and interface with the PostgreSQL database, the *ORM engine*. Another layer allows communications between the server and a web browser, the Web layer.
- c. **Web client:** Which provides user interface, it is running in a web browser as Javascript application. The client issues a request to the server, gets data back and display the result (e.g. a list of customers) in different ways (as forms, lists,

calendars, ...). Upon user actions, it sends queries to modify data to the server.

7. Scalability.

ODOO is very flexible and scalable. It can be used in systems with only a few concurrent users, but it can easily be extended to a system that can be used by a few thousand users, as is the case with the installation in the Portuguese Ministry of Education. The following figure shows the physical architecture of such kind an implementation.

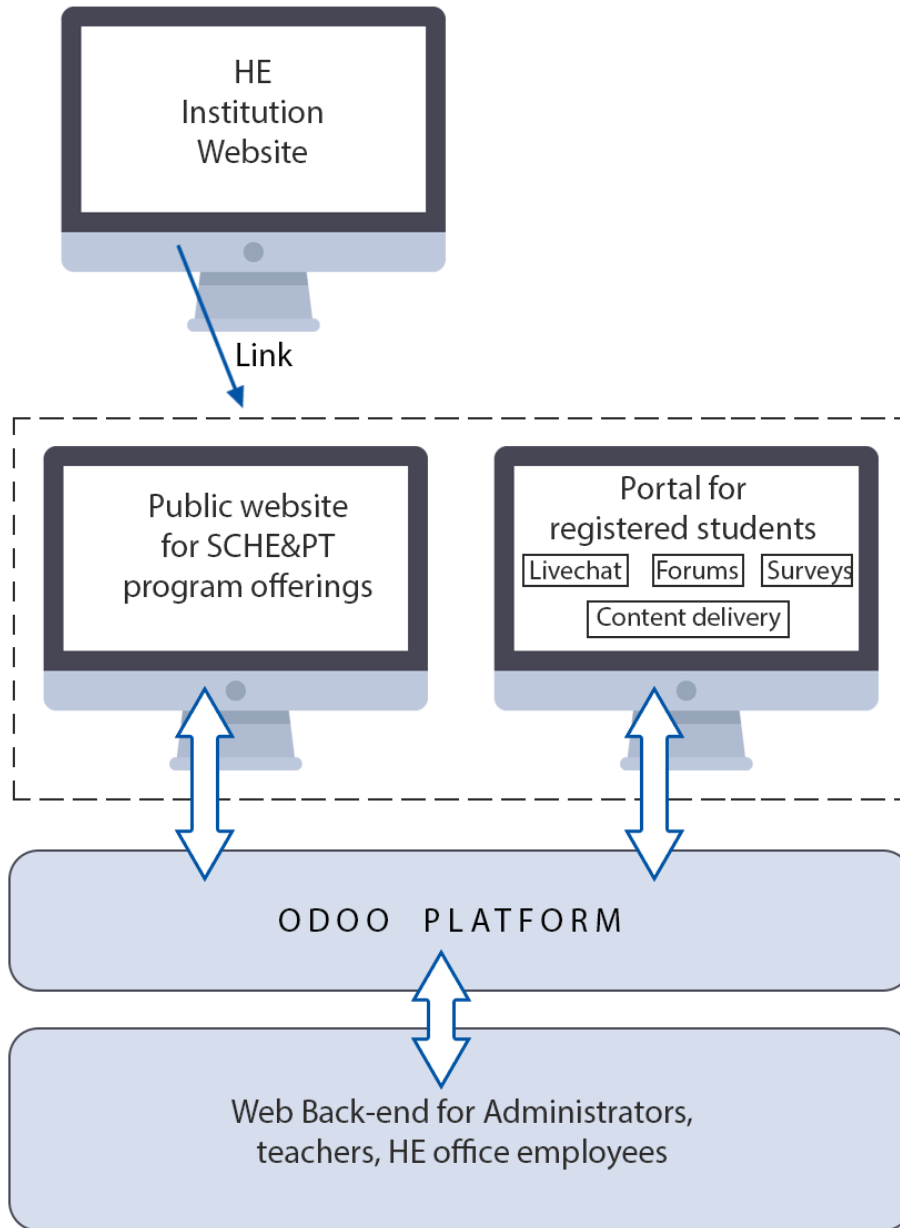

4. Vision of the eLearning architecture for PT&SCHE

The following figure represents a global vision of the architecture of the eLearning platform of an HE institution. The platform consists of 3 interconnected units:

- Odo platform itself
- Backend application for PT@SCHE program administration
- Students Portal

The student portal is realized as a standard website, and it enables easy connection to the existing web site of a HE institution. This ensures consistent expansion of the existing websites of HE institutions which will organize PT&SCHE education.

This architecture should provide the automation of the complete education process within PT&SCHE program, starting with enrollment for a particular program, through the delivery of study materials to the examination.

4.1 Back-End

The Back-end component provides authorized access to the eLearning platform users, and through certain access rights and roles in the system of PT&SCHE education it provides access

to individual modules. The following figure shows a dashboard with all the available Back-end modules, which are used by HE staff and employees.

Discuss is a module for exchanging messages between all users of the platform, through email, or chat.

PT&SCHE Management is the key module for the organization of the structure of PT&SCHE program. One example for the content creation of a program is displayed on the figure below:

Faculties is the module intended for teaching staff and their activities.

The screenshot shows the 'Faculties' module in the PT@SCHE mgmt system. The user is logged in as 'Administrator (educat_base)'. The page title is 'Faculties / Amela'. There are buttons for 'Edit', 'Create', and 'Attachment(s)'. A 'Create Employee' button is also visible. The main content area shows a profile for 'Doctor Amela Zeković' with a photo. Below the profile, there are tabs for 'Personal Information', 'Subjects', and 'Sessions'. The 'Subjects' tab is active, displaying a table of subjects.

Surveys is a module that provides data for the analysis of the program's quality. It enables the creation of ad hoc questionnaires, their forwarding to student's personal pages, and the analysis of the answers.

Employees is a module for staff management within a HE institution. It can be used independently or in conjunction with an existing HR module in the HE institution.

TimeTables is an optional module that defines class scheduling. It can be used for Blended learning.

The screenshot shows the 'TimeTables' application interface. The main menu includes 'Timings', 'Sessions', 'Generate Sessions', and 'Generate Sessions Report'. The 'Sessions' section is active, showing a 'Create' button and a 'Click here to...' link. A 'Generate Sessions' dialog box is open, displaying the following details:

- Course: Metodologije i alati - softver 1
- Batch: NicatFirst
- Start Date: 04/20/2017
- End Date: 09/25/2017

The dialog also shows a weekly schedule grid with columns for Monday through Saturday. The current view is for Tuesday. The table below shows the generated sessions:

Day	Timing	Faculty	Subject	Classroom
Monday	Prvi cas	Miroslav	Uvod u racunarske sisteme i programske jezike	Amfiteatar
Monday	Lekcija 1	Dragan	Introduction - Elective Subject	Kabinet 1

Buttons for 'Proceed' and 'Close' are visible at the bottom of the dialog.

Website is actually a CMS system for updating the public Web site of the PT&SCHE program. It is a powerful editor for easy maintenance of the web content.

The screenshot shows a website editor interface. The top navigation bar includes 'Početna', 'Kratki programi', 'Student', 'Kontakt', 'Features', 'Administrator', and 'Sign in'. The main content area displays a banner for 'PT&SCHE' with the text 'TIME AND CYCLE STUDIES IN SERBIA'. A 'CUSTOMIZE' panel is open, showing options for 'Block', 'Background Image', 'Background Image Sizing', 'Background Color', 'Slideshow speed', 'Add Slide', and 'Remove Slide'. The banner image shows a group of young people holding up their smartphones. Below the banner, the text 'NAJNOVIJI KRATKI PROGRAMI' is visible.

Live Chat is a module for creating and managing information from chat rooms. The following image shows how to configure a chat channel. When an operator joins a channel, an appropriate message appears on the student's page and the student can enter into direct communication with the operator.

The screenshot shows the configuration page for a Live Chat channel named 'FullWebDeveloper'. The interface includes a navigation bar with 'Live Chat', 'Channels', 'Report', and 'Configuration'. Below the navigation bar, there are buttons for 'Edit' and 'Create', and a status indicator '2 / 2'. The main content area is divided into two sections: 'Operators' and 'Options'. The 'Operators' section lists 'Amela Zeković' as an operator. The 'Options' section includes fields for 'Text of the Button', 'Chat Input Placeholder', and 'Welcome Message'. A note at the bottom of the operators list states: 'Operators that do not show any activity in Odoo for more than 30 minutes will be considered as disconnected.' There is also a link 'How to use the Website Live Chat widget?' and a status indicator 'Unpublished On Website'.

Dashboard:

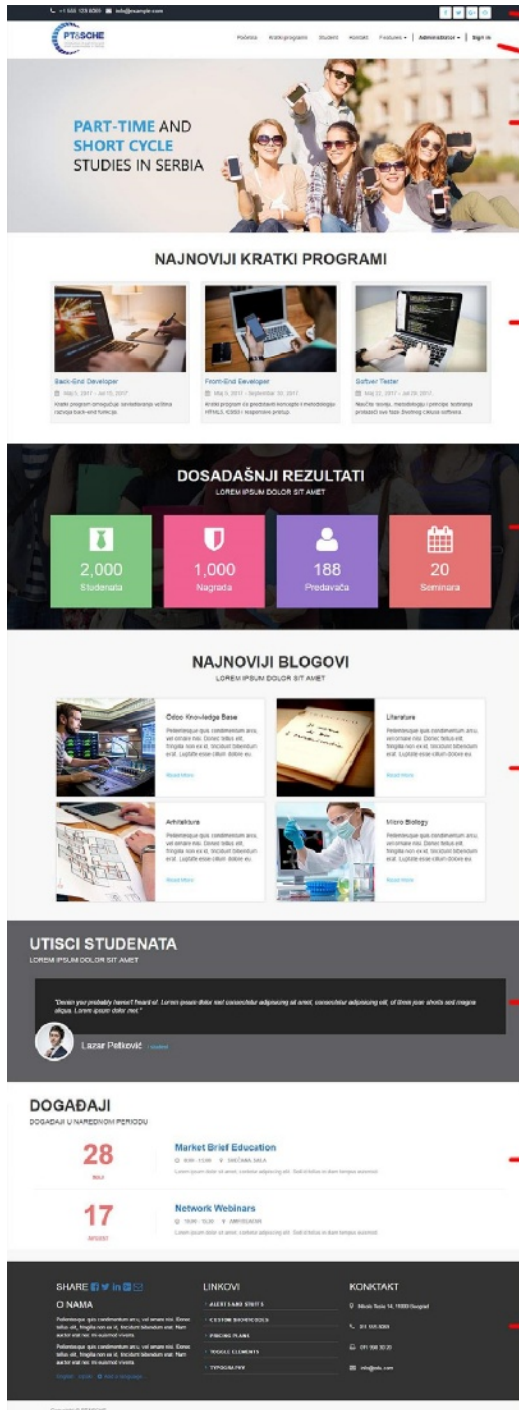

4.2 Public Web Site for SCHE&PTE programs

Public website for PT&SCHE programs is an informative, responsive website, the primary purpose of which is to provide potential students with information about available programs and terms and conditions for PT&SCHE.

Website is visually divided into several sections:

- Top horizontal area with contact info and social media links
- Horizontal menu area with logo
- Central section for showing page content
- Footer area

In the central section of the homepage visitors can see the latest short programs announcements, as well as some other informative and promotional areas, as it is shown on the screenshot below.

Contact info and Social media links

Logo and Main menu area

Promotional banner

The Latest Short Programs area

Promotional area

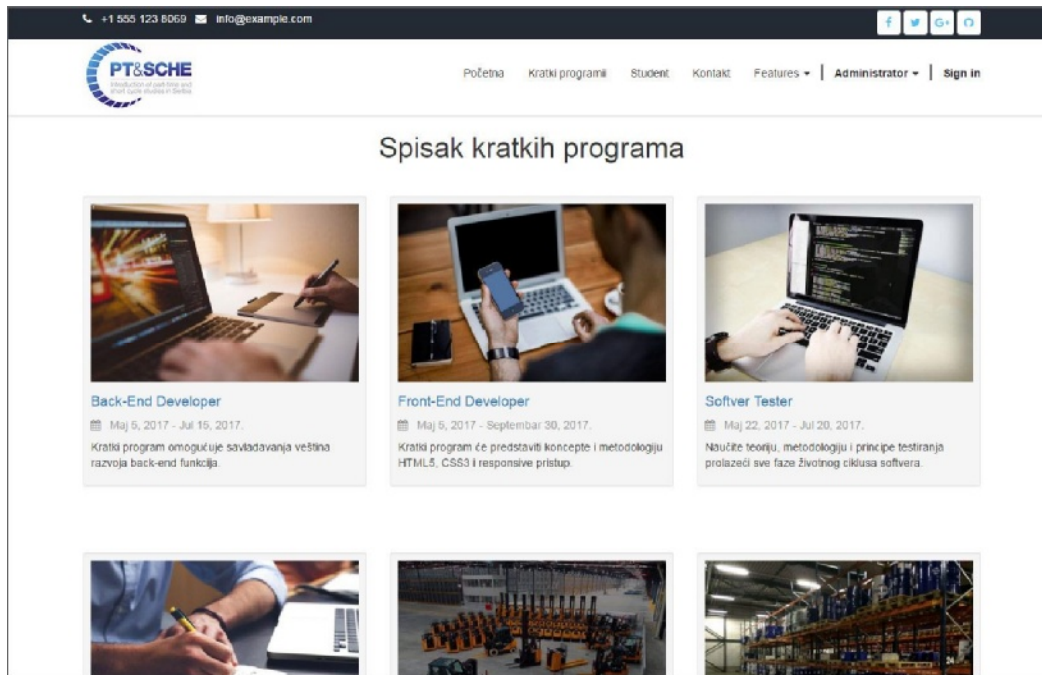

Blog area

Students' testimonials

Upcoming events

Footer area

Another important informative page is the Short Programs List page, with the list and short description of all available PT&SCHE programs.

Visitor can select a desired program and see all available information regarding the program. A typical page with a short program details has the following areas:

The screenshot shows the website for the 'Back-End Developer' program. At the top, there is a navigation bar with 'Početna', 'Kako je program', 'Studij', 'Kontakt', 'Features', and 'Administrator | Sign in'. The main content area is titled 'Back-End Developer' and includes a 'Prijavi se' (Enroll) button. Below this, there is a section for 'OPIS KRATKOG PROGRAMA' (Program Description) and 'CILJEVI KRATKOG PROGRAMA' (Program Goals). A 'PREDMETI' (Subjects) section lists various topics like 'Metodologije i alati za razvoj softvera 1' and 'Softver Design Process'. The 'PREDAVAČI' (Instructors) section features profiles for Jovan Jovanović, Milica Mišković, and Petar Petrović. At the bottom, there is a 'PROGRAM PODRŽALI' (Supporting Companies) section with logos for COMTRADE, Telekom Srbija, and HostingBuY. The footer contains social media links, a 'LINKOVI' (Links) section, and 'KONKTAKT' (Contact) information.

4.3 Portal for Registered Students

The Student Portal is conceived as a personalized single place where a student has access to all the information and activities he/she performs in the learning process.

Below is an example of such a page:

Petar Petrović
STUDENT

Prijavljen za kratki program:	Back-End Developer
ETSB:	30
Nastavni period:	20.05.2017. - 15.7.2017.
Angažovanje:	5 sati nedeljno
Uverenje o završenom programu:	Sertifikat

Plan With Exam Management

Exams require careful planning, skillful execution and collaborative effort for successful execution. With the help of the Exam Management module of OpenEduCat, exam handling just became much simpler and powerful.

Rok: 10.07.2017.

Pošalji

Set Exam Schedule

The exams are scheduled for a set of students and they are informed as soon as the exam is created. With complete transparency and great information transfer within the OpenEduCat system, students can prepare for the exam way before it gets started.

Rok: 10.06.2017.

Poslato

Supports Forms and Fields

Creating an exam is super-easy. It just takes setting up few fields that are necessary for creating the exam. Exam creation requires time allocation, exam session name, the subject for which the exams needs to be taken.

Rok: 22.06.2017.

OSNOVE KOMPJUTERSKOG PROGRAMIRANJA

For the content delivery of the PT&SCHE program the portal for students uses the channel concept. The following figure depicts this concept in more details.

In order this concept could deliver maximum effects, the contents of the PT&SCHE program should be prepared and structured in an appropriate way. The rules for content organization are as follows:

1. One PT&SCHE program consists of the following components:
 - a. One or more courses, some of which are mandatory and some elective
 - b. Two or more surveys. One before, and the other at the end of the course
 - c. One or more assignments
 - d. One or more exams.
2. Each course consists of one or more Learning Objects in the form of lessons, which can be prepared as video material, a static document (Pdf or PPT) or a Dynamic XHTML document (LAMS seq.) which can contain links to other multimedia content generated by mDITA authoring Tool.
3. Each course has its own Forum for collaboration with other students on that course and teaching staff.
4. Each course has its own Chat Room for scheduled online consultation with the teaching staff.

The screenshots below show the screens of the learning content delivery:

PLANIRANJE RESURSA

Sagledavaju se tri osnovna resursa potrebna za implementaciju

Kada govorimo o implementaciji sistema menadžmenta, moramo sagledati potrebne resurse.

Glavni resursi za implementaciju sistema menadžmenta su:

- **INFORMACIJE**
- **VREME**
- **NOVAC**

INFORMACIJE (ZNANJE) o sistemu menadžmenta (zahtevima ISO standarda) mogu se obezbediti na više načina:

1. Samostalnim istraživanjem i učenjem;
2. Odlaskom na eksterno organizovane seminare o ovim temama i/ili organizacija internih obuka;
3. Angažovanjem konsultanta.

VREME potrebno za implementaciju, zavisi od našeg pristupa:

1. **Samostalni rad** traje duže ali se može organizovati prema raspoloživim vremenskim kapacitetima, tako da proizvodnja i/ili pružanje usluge trpi minimalno ili ništa;
2. **Angažovanje konsultanta** ubrzava projekat ali zahteva kompromis sa njegovim vremenom i njegovim načinom rada

Ne postoji propisano vreme za implementaciju nekog ISO standarda svodi se na vreme koje bismo mi mogli posvetiti i složenost našeg preduzeća (veličina, broj lokacija, raznolikost radnih procesa, specifičnost u pogledu primene zahteva standarda)

NOVAC je resurs na koji prvo pomislimo. Potrebno je imati na umu da dobro izveden projekat implementacije sistema menadžmenta uvek sam isplati sebe.

Da bismo što bolje procenili troškove, potrebno je da sagledamo:

1. Ponude na tržištu i šta se u njima nudi;
2. Iste ili slične projekte u okruženju i njihova iskustva;
3. Nivo naše kompetentnosti kada je reč o tumačenju zahteva standarda;
4. Vreme koje nam je na raspolaganju za implementaciju standarda

Sva prava su zadržana.

For the purpose of collaboration of students and professors within a single subject, channels for Forum and Live Chat are provided.

Student forum activities can be optionally further evaluated. The implemented forum supports the KARMA principle of awarding points. The following screenshots show the details of these functions.

The screenshot shows the 'Live Chat' administration interface. At the top, there are navigation tabs for 'Channels', 'Report', and 'Configuration'. Below this, the current channel is identified as 'FullWebDeveloper'. There are buttons for 'Edit', 'Create', 'Attachment(s)', and 'Action'. A 'Join Channel' button is visible next to the channel name. The interface is divided into two main sections: 'Operators' and 'Options'. The 'Operators' section lists 'Amela Zeković' as an active operator. The 'Options' section allows for configuring the chat button text, input placeholder, and welcome message. A note at the bottom of the operators section states: 'Operators that do not show any activity in Odoo for more than 30 minutes will be considered as disconnected.'

The sidebar contains a 'Submit a Link' button with a dropdown menu showing options: 'Ask a Question', 'Submit a Link', and 'New Discussion'. Below this is an 'Unsubscribe' button. The 'About This Community' section describes the forum as a place for professionals and enthusiasts to share and discuss products and services, and includes a link to 'Read Guidelines'. At the bottom, there is a 'Moderation Tools' button.

Forum page for one of the subjects

5. Template for SCHE Program content preparation

As a helpful tool in the preparation phase of the learning content for the program, a google sheet was prepared. Using this sheet the staff involved in the content preparation will be able to administer the program structure more easily.

The URL of the sheet is at:

The screenshot shows a Google Sheet titled "SCSHE-Program Template". The sheet is organized into columns A through E and rows 1 through 12. Row 1 is a header row with a green background, containing the PT&SCHE logo in column A and the title "Templejt za pripremu kratkog programa" in column C. Rows 3 through 11 contain input fields for program details: "Naziv Kratkog programa", "Ukupno trajanje programa", "Procenjeno nedeljno angazovanje", "Preduslovi", "Kratak opis programa", "Ciljevi programa", and "Kompanije koje podzavaju program". Row 8 and 9 have a yellow background. The bottom of the sheet features a navigation bar with tabs: "Opste", "Instruktori", "Struktura", "Zadaci", "Forumi", and "Parametri".

	A	B	C	D	E
1			Templejt za pripremu kratkog programa		
2					
3		Naziv Kratkog programa			
4		Ukupno trajanje programa			
5		Procenjeno nedeljno angazovanje			
6		Preduslovi			
7					
8		Kratak opis programa			
9		Ciljevi programa			
10					
11		Kompanije koje podzavaju program			
12					

The template contains 5 separate sections for entering details about the program, such as the name, objectives, information on instructors, lessons, assignments and forum.

6. Conclusion

Based on the requirements and conclusions of the document for the selection of LMS platform, Odoo is selected as the platform of choice.

Odoo is built upon a Model-View-Controller (MVC) architecture, and is formed from three main components:

- PostgreSQL database server
- Odoo application server
- Web client

A global vision of the architecture of the eLearning platform contains 3 interconnected units:

- Odoo platform itself
- Backend application for PT@SCHE program administration
- Students Portal

The student portal is realized as a standard website, and it enables easy connection to the existing web site of a HE institution.

This architecture should provide the automation of the complete education process within PT&SCHE program.
